The USDA-Natural Resources Conservation Service's *National Engineering Handbook*, Part 630, Hydrology, chapter 10, publishes figure 10–2 (**Figure 11-C.1** below) for estimating direct runoff from rainfall for selected runoff curve numbers. Many users find it more convenient to work with the tables that follow in this appendix, which were published by the NRCS in 1960 and revised in 1976. The tables show runoff amounts from rainfall quantities up to 40 inches and for runoff curve numbers 50 to 98, inclusive. In most cases the tables give more exact solutions than can be interpolated from the graph in **Figure 11-C.1**. The runoff value was determined using the equation:

$$Q = \frac{(P - 0.2S)^2}{P + 0.8S}$$

Where: Q = Depth of runoff (inches)

P = Depth of rainfall (inches)

S = Maximum potential retention (inches)
